

Year 12 - IT

Using the HTML skills learned over the last term I would like you to create a multipage website for the following client brief:

A new dessert shop has opened next door to Southside Shopping Centre. They are looking to attract new customers. You are to design their homepage which should be impactful and lead customers to different pages on the site. They would like to have a page with their menu available for the customers as well as a page with discounts. They need to have a contact us page which could integrate with Google Maps. They have asked that the theme of the website matches their fairy tale theme housestyle. This includes lots of pink and glitter, how **fabulous!**

Once you have created this site you will need to create a presentation in which you should pitch your creation to the client. You should include your design decisions, including layout and style choices.

This will be presented on your return to school in front of Mr Berner and Mr Shillingford (tough crowd) and there is a prize for the winning pitch.

The most advanced sites will use Bootstrap which can be further investigated at <https://www.w3schools.com/bootstrap4/>

You should create your site on repl.it and add the sharing link with the presentation on Google Classroom before we return. <https://replit.com/languages/html>
