

# Geography A Level

## Summer Holiday Work Year 12 into 13

### NEA

1. Write up your introduction

You must include everything that is on the template on the google classroom.

2. Complete your methodology table. (on google classroom - you began this task in lesson time)

3. Create your data collection sheets. How will you record your data when you're out in the field?

you could use this app: GeogIT. It's only 99p on google play/ apple

[https://www.youtube.com/watch?v=9fgdHor\\_DRk](https://www.youtube.com/watch?v=9fgdHor_DRk)

4. Go and collect your data!

Make sure you are safe. You might want to pair up and go together over the summer holiday or take a family member with you.

Make sure you follow your methods exactly and record as much detail as possible E.g. locations, weather conditions, dates, times.

The more data you have the easier your analysis will be!
